Qloud Cover Migration

Transitioning from Qlik Sense Client-Managed to Qlik Cloud can be a challenging and resource-intensive process. Qloud Cover Migration is a service designed to streamline and automate this transition, significantly reducing the time and effort required. Customers can save up to 80% of the time typically spent on migrating to the cloud.

Qloud Cover Migration enables users to define their desired outcomes and choose which components to migrate. The service then automatically handles the migration of applications, data streams, users, extensions and all other relevant content to Qlik Cloud, ensuring a seamless transition.

How does it work?

Qloud Cover Migration makes the transition from Qlik Sense Client-Managed to Qlik Cloud straightforward by helping you through each step of migrating to Qlik Cloud.

- 1. Metadata Extraction**

The tool extracts metadata from the existing Qlik Sense Client-Managed environment(s), providing a detailed inventory of applications, streams, and other content.

- 2. Defining your Qlik Cloud structure**

Decide on the final configuration of your Qlik Cloud environment. Structure it around existing streams, create new spaces from scratch, and allocate roles as needed.

- 3. Selecting Content for Migration**

From the extracted metadata, select the applications, users, data connections, extensions, and themes you wish to migrate, and determine their placement.

- 4. Automated Migration**

Based upon your chosen content, *Qloud Cover Migration* automatically creates the structure of the desired Qlik Cloud environment and migrates all content as specified. Additionally, it provides the option of splitting up the migration into several smaller steps.

- 5. Adjust and Repeat**

Not satisfied with the migration? Fear not, as *Qloud Cover Migration* also includes the ability to effectively revert back from a given migration, allowing you to start again from scratch.

- 6. Enjoy your new Qlik Cloud environment**

Congratulations, you and Qloud Cover have migrated all your content to Qlik Cloud. Have a glass of champagne (Optional. Champagne sold separately).

How to get started

- Go to the portal qloudcover.com.
- Click on “products” → click on “**Qloud Cover Migration**”.
- Find guidance at the product page and fill out the form for getting your demo.
- Or contact us directly at qconnect@stretch.
- Go to the “help” section for additional information.

Why choose Qloud Cover Migration?

- ✓ **Multi-tenant Migration support:**
Enables scalable migration across multiple Qlik Cloud tenants and environments.
- ✓ **Deployment options:**
Install locally or use as a SaaS solution with full logging capabilities.
- ✓ **Automated script updates:**
Automatically adjusts data scripts post-migration and allows for customized modifications.

A part of the Qloud Cover product line

Unlock the full potential of your Qlik experience with our exclusive suite of tools designed to enhance and streamline your workflows.

At Stretch Qconnect, we've developed Qloud Cover to specifically cater to the needs of developers, data scientists, and analysts who rely on Qlik for their data visualization and analytics projects.

Why Qloud Cover?

Qloud Cover is not just another add-on; it's a necessity for those looking to enhance their Qlik capabilities. Developed by Stretch Qconnect, these tools fill the gaps that Qlik itself hasn't addressed, offering you a smoother, more efficient, and more productive working experience.

Dive into a world where data management is simplified, and your analytics capabilities are expanded. Join us at Qloud Cover, and transform the way you use Qlik today!
